

The next web is alive.

Replicache is a JavaScript framework for building high-performance, offline-capable, collaborative web apps.

Benefits

Realtime collaboration

Users see each others' changes live, as they happen. No refreshes, no locking.

Instant UI

Say goodbye to roundtrips and progress bars. All reads and writes are "optimistic" by default.

Who's using Replicache?

"Replicache saved us years of engineering work on a collaborative diagramming tool. The developer experience feels like saving state locally, but it automagically syncs and resolves conflicts."

Noam Ackerman

Head of Canvas by Monday

Placemark

"Realtime collaboration is too big for early teams to build. For my small team at Placemark, using Replicache meant that collaboration could just work and I can focus on building the product."

Tom MacWright

Founder

Motif

"Replicache is the backbone of our offline-first architecture at Motif. We have found it shockingly easy to use, and absolutely reliable."

Michael Fester

Co-Founder
